

PIZZA BOX STORY BOARD

It is possible to make a pizza box into a story board that is portable.

There are various means of achieving this.

The technique can use a felt background with felt cutouts. Felt cut outs will adhere to a felt background. Glasspaper stuck on the back of paper or card cutouts is another "adhesive" technique that can be used with felt. A 1cm square of glass paper will probably be sufficient to provide the required adhesion for each shape.

The technique can also use a paper or card background and use paper or card cutouts. If paper/card is used, small balls of "Takit" (BlueTak) provide perfect adhesion. This particular solution was used for the story box shown on the next page.

The great advantage of using a pizza box is that all cutouts and materials can be stored in the closed box when not in use. The box itself can be stored easily, like a book or folder, on a bookshelf, when not in use.

The pizza boxes opens out to make the display background for the story being told. See the photographs on the next page.
